Energy and Engineering Services

## Building Energy Performance Standards (BEPS) Benchmarking

Governing bodies across the United States are adopting and updating building energy performance requirements for tracking and reporting energy and carbon metrics. Building Energy Performance Standards (BEPS) are designed to meet climate goals by reducing energy consumption and greenhouse gas emissions.

Global Facility Solutions can help building owners and operators nationwide to navigate mandatory performance and reporting requirements. Adhering to the jurisdictional standards offers building owners the opportunity to reduce operating costs and complete an energy analysis as a tool to improve lease-up potential.

*In an ever-evolving landscape, Global Facility Solutions offers Building Energy Performance Standards Benchmarking Services to guide you through the new city and/or state energy benchmarking requirements. Whether you are beginning the benchmarking process or trying to understand the compliance cycle, GFS will steer you through step-by-step.*

The process begins with a review of your ENERGY STAR® profile. After establishing what options are available, we will work with you to decide upon a custom path of operations adjustments and strategic investment to achieve BEPS compliance.

### Improving Building Performance and Enhancing Bottom-Lines

#### THE GFS SUSTAINABILITY PROGRAM

As an ENERGY STAR Partner of the Year, GFS can guide you through performance and reporting requirements established by your governing jurisdictions.

From local clients in the Mid-Atlantic region to Fortune 500 commercial building owners nationwide, our award-winning team helps property owners to implement energy efficiency measures and to develop sustainability programs.

Global Facility Solutions provides ENERGY STAR® evaluations including Statement of Energy Performance (SEP) assessments and documentation for ENERGY STAR certification.

We help organizations who are looking to take a strategic approach to energy management and those who are required by legislation to disclose energy use.

Following a BEPS benchmarking analysis, GFS's experienced and fully-certified engineering team stands ready to perform subsequent energy audits, building tune-ups, and equipment modification consulting for comprehensive energy efficiency capital planning. Global Facility Solutions' consulting, engineering and sustainability services empower our valued clients to easily and immediately convert expert assessments into direct action.

Contact us today to learn how we can help you to meet or exceed jurisdictional requirements and reduce costs.
